# Introduction

# Business Sentiment

Methods to create business sentiment indicators

Use the BER business tendency surveys

Try to improve on existing indicators

## **Confidence:**

- Agents' perceptions of the current and expected business climate.

## **Uncertainty:**

- Agents' inability to forecast the probability of future events occurring.

Compare to real GDP growth

- Correlations
- Concordance
- Predictive content

# Data: BER Business Tendency Surveys

# Number of respondents over time per sector

# BER Business Tendency Surveys

Measure sentiment from qualitative surveys of agents with disparate views

## SERVICES SURVEY QUESTIONNAIRE

Please tick the appropriate boxes. Answer only the questions applicable to your business. Confidential: Individual replies will not be published or quoted.

Estimated development  
3<sup>rd</sup> Quarter 2012

Expected development  
4<sup>th</sup> Quarter 2012

1. Are prevailing business conditions

Q1

Satisfactory

Unsatisfactory

2. Compared with the same quarter of a year ago ...

Orthogonal Impulse Response from Uncertainty\_Combined

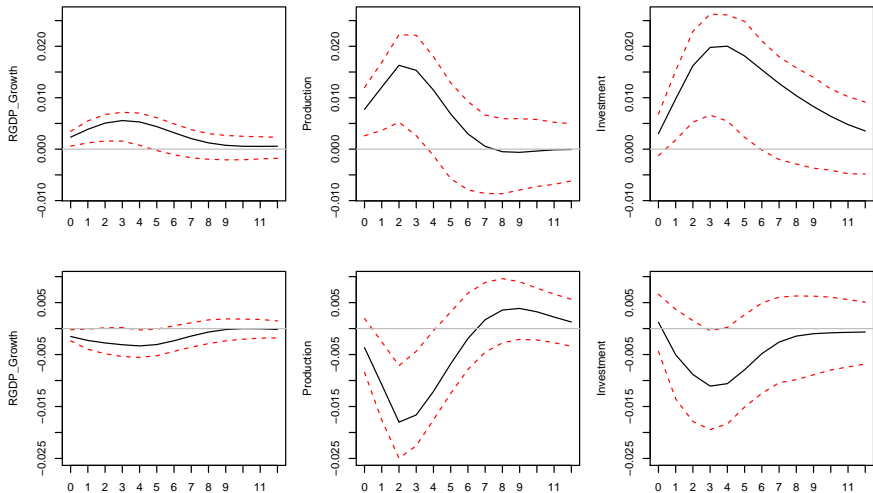

95 % Bootstrap CI, 1000 runs

# FEVD: three-variable VAR

# IRFs of expanded VAR

# Conclusion

# Conclusion

New indicators improve on existing indicators

- Higher correlation with real GDP growth (tracking record)
- Higher concordance with official SARB cycle

New indicators may be useful

- Advanced warning of turning points (early availability)
- Predictive content
- Useful for forecasting (out-of-sample and real-time forecasting)
- Methods could be useful for Consumer Tendency Surveys

**The End**

# Subsector weights applied in the construction sector

# Subsector weights applied in the trade sector

# Subsector weights applied in the services sector

# GDP share weights

# Methodology: Confidence

$$f(\Delta^h Y_{t+k}) = \begin{cases} -1, & \text{if } \Delta^h Y_{t+k} < 0 \\ 0, & \text{if } \Delta^h Y_{t+k} = 0 \\ 1, & \text{if } \Delta^h Y_{t+k} > 0 \end{cases}$$

$$C_t^0 = \frac{1}{W_t} \sum_{i=1}^N w_{it} f_t(\Delta^4 Y_{i,t})$$

$$C_t^1 = \frac{1}{W_t} \sum_{i=1}^N w_{it} f_t(\Delta^4 Y_{i,t+1}),$$

# Methodology: Uncertainty

$$D_t^1 = \frac{1}{W_t} \sum_{i=1}^N (w_{it} f_t(\Delta^4 Y_{i,t+1}) - \mu_{t+1})^2,$$

$$D_{t+1}^0 = \frac{1}{W_{t+1}} \sum_{i=1}^N (w_{it+1} f_{t+1}(\Delta^4 Y_{i,t+1}) - \mu_{t+1})^2$$

$$D_t = \frac{D_t^1}{D_{t+1}^0}$$

$$\epsilon_{i,t+1} = f_{t+1}(\Delta^4 Y_{i,t+1}) - f_t(\Delta^4 Y_{i,t+1})$$

$$A_t = \bar{\epsilon}_{it+1}^2,$$

$$I_t = \frac{1}{W_{t+1}} \sum_{i=1}^N (w_{it+1} \epsilon_{it+1} - \bar{\epsilon}_{t+1})^2,$$
